About me

I can tell about me that I am committed to all my professional development and career, I am very keen to learn more. I am a fast learner with a good photographic memory, good intuition and I am able to work under pressure. I have started with python and I have learned a lot about it by myself. I have started to learn some networking on Linux based servers and virtual machines. I am determined to achieve my goals no matter how hard I have to work. I like constructive criticism and anything that helps me to move forward in my career. My current goal is to join a company on software developer role and begin growing in the chosen direction.
